PREFACE

The Household Income Survey Report, 2024 presents the latest statistics on the household income of Malaysian citizens. This publication also provides a comprehensive overview of the distribution, composition, and structure of household income in the country.

The compilation of income-related statistics published in this report is based on the concepts and guidelines from the Canberra Group Handbook on Household Income Statistics, Second Edition, 2011 published by the United Nations.

The statistics from this report provide pertinent information used by government agencies as input in the planning, formation and monitoring of national development plans. These statistics can also be used as a reference source for economists, academicians, the private sectors and individuals for more detailed research and analysis purposes.

This report consists of three (3) main parts. The first part presents a summary of findings, covering the distribution of households by characteristics on household, urbanisation and household income. The second part shows detailed statistics such as household statistics, household gross income and household disposable income. The relative standard error is also provided in this section as a guide for users. Meanwhile, the third part explains technical aspects such as the concepts, definitions, and survey methodology to facilitate users to better understand the published statistics.

The Department of Statistics Malaysia (DOSM) gratefully acknowledges the cooperation rendered by all parties who have contributed directly and indirectly in realising this publication. Every feedback and suggestions from all parties towards improving this report in the future are highly appreciated.

1. PENGENALAN

Malaysia pada tahun 2024 mengekalkan prestasi sosioekonomi yang stabil dengan sokongan pertumbuhan hampir semua sektor utama ekonomi serta pemulihan berperingkat persekitaran pasaran global. Jumlah penduduk negara adalah 33.4 juta orang dengan struktur demografi yang semakin menua, memberi implikasi langsung terhadap pola perbelanjaan isi rumah, keperluan kesihatan dan perkhidmatan sosial.

Dari sudut makroekonomi, Keluaran Dalam Negeri Kasar (KDNK) berkembang pada kadar 5.1 peratus pada tahun 2024, disokong oleh pertumbuhan berterusan dalam perbelanjaan akhir swasta yang juga meningkat 5.1 peratus. Inflasi 1.8 peratus kekal sederhana sepanjang tahun, membantu mengekalkan kuasa beli rakyat serta meredakan tekanan kos sara hidup. Pencapaian ini turut dipacu oleh kestabilan pasaran komoditi global serta keberkesanan langkah pengurusan harga di peringkat domestik.

Prestasi ekonomi negara turut disokong oleh perkembangan positif dalam sektor perdagangan luar. Eksport Malaysia melonjak 5.8 peratus pada 2024, didorong oleh barangan elektrik dan elektronik (E&E), minyak dan gas, serta pertumbuhan kukuh eksport perkhidmatan, sekali gus memperkukuh kedudukan negara di pasaran terbuka. Import turut meningkat 13.1 peratus terutamanya dalam kategori barangan antara guna, barangan modal dan barangan penggunaan, mencerminkan pengeluaran domestik yang aktif dan keyakinan isi rumah terhadap prospek ekonomi.

Kadar penyertaan tenaga buruh meningkat kepada 70.6 peratus pada tahun 2024, manakala kadar pengangguran mencatatkan 3.2 peratus, lebih rendah berbanding 3.4 peratus yang direkodkan pada tahun 2023. Purata gaji dan upah bulanan pekerja bagi warganegara mencapai RM3,652 pada tahun 2024, dengan pampasan pekerja menyumbang 33.6 peratus kepada KDNK pada tahun 2024. Ini disokong oleh pelaksanaan kadar gaji minimum baharu serta mekanisme gaji progresif yang memperkukuh pendapatan isi rumah, khususnya bagi kumpulan rendah dan sederhana.

Justeru, landskap sosioekonomi Malaysia pada tahun 2024 berada pada landasan yang positif dengan pertumbuhan KDNK yang stabil, inflasi terkawal, pasaran buruh yang kukuh sertaimbangan perdagangan yang seimbang. Perkembangan positif ini menyediakan asas penting kepada negara untuk memasuki fasa baharu pembangunan dalam Rancangan Malaysia Ketiga Belas (RMK13), khususnya dalam memperkukuh kesejahteraan rakyat dan meningkatkan daya saing ekonomi negara di peringkat global.

2. LATAR BELAKANG SURVEI

Jabatan Perangkaan Malaysia (DOSM) telah melaksanakan Survei Pendapatan Isi Rumah dan Kemudahan Asas (HIS & BA) 2024 bagi menilai kedudukan semasa taburan pendapatan isi rumah, kadar kemiskinan dan jurang pendapatan. Survei ini menggunakan kaedah pensampelan berkebarangkalian yang mewakili sebanyak 8.2 juta isi rumah warganegara Malaysia pada tahun 2024. Pemilihan sampel adalah berasaskan senarai tempat kediaman yang diperolehi daripada Banci Penduduk dan Perumahan Malaysia 2020. Pengumpulan data dilaksanakan melalui temu ramah bersemuka, menjadikan survei 2024 ini sebagai pusingan kali ke-21 sejak mula diperkenalkan pada tahun 1974.

Laporan ini membentangkan analisis menyeluruh mengenai taburan pendapatan isi rumah warganegara Malaysia. Dapatan survei ini turut digunakan secara meluas bagi pelbagai kajian sosioekonomi yang lebih mendalam serta adalah selaras dengan amalan terbaik di peringkat antarabangsa, dengan merujuk kepada *Canberra Group Handbook on Household Income Statistics, Second Edition* yang diterbitkan oleh *United Nations* pada 2011.

3. PENEMUAN SURVEI

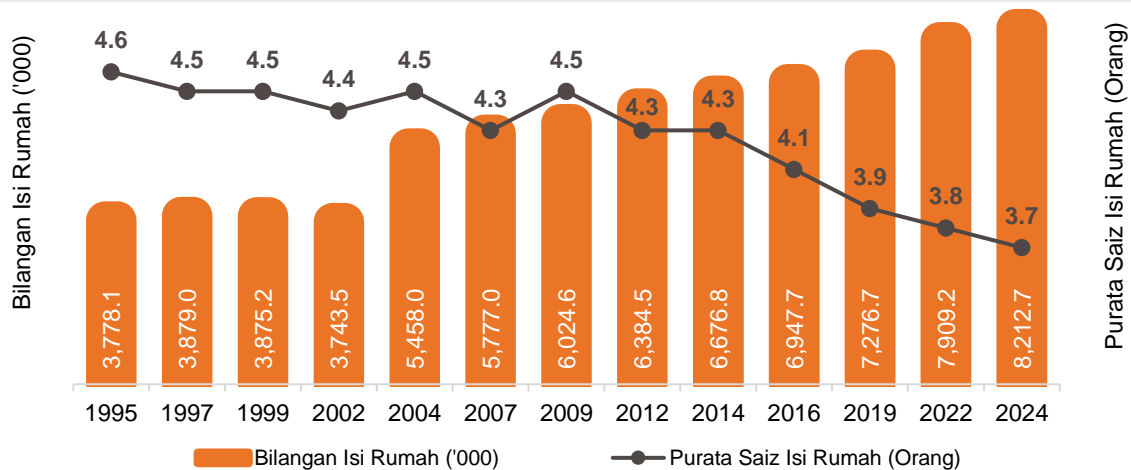

3.1. CIRI-CIRI ISI RUMAH DAN PERBANDARAN

3.1.1. Saiz Isi Rumah dan Bilangan Penerima Pendapatan

Terdapat seramai 8.7 juta isi rumah di Malaysia pada tahun 2024, dengan 8.2 juta daripadanya merupakan isi rumah warganegara. Sebanyak 98.2 peratus adalah isi rumah bersaudara, manakala 1.8 peratus merupakan isi rumah bukan bersaudara. Setiap isi rumah mempunyai saiz isi rumah tersendiri yang merujuk kepada bilangan orang dalam isi rumah tersebut. Secara purata, saiz isi rumah di Malaysia adalah 3.7 orang pada tahun 2024 berbanding 3.8 orang pada tahun 2022 [**Carta 1**]. Purata saiz isi rumah di kawasan bandar ialah 3.6 orang (2022: 3.7 orang), berbanding 3.9 orang bagi isi rumah di kawasan luar bandar (2022: 4.0 orang).

RINGKASAN PENEMUAN

3.1.2. Kadar Urbanisasi

Urbanisasi merujuk kepada proses perubahan sesuatu kawasan daripada luar bandar kepada bandar. Pemandaran juga berlaku sekiranya penempatan bandar berkembang menjadi lebih besar dan kompleks. Urbanisasi sesebuah bandar memerlukan panduan yang komprehensif dan seragam agar dapat terus berkembang. Rancangan Fizikal Negara ke-4 mensasarkan kadar urbanisasi negara mencapai 85.0 peratus menjelang tahun 2040. Kadar urbanisasi di Malaysia dianggarkan sebanyak 76.0 peratus pada tahun 2024 berbanding 70.9 peratus pada tahun 2010 [Paparan 1].

Carta 2: Peratusan Isi Rumah di Kawasan Bandar mengikut Negeri, 2024

Nota: Kadar perbandingan merujuk kepada bilangan isi rumah yang tinggal di kawasan bandar

3.2. PENDAPATAN ISI RUMAH

Pendapatan isi rumah merujuk kepada jumlah pendapatan yang diterima oleh ahli isi rumah, sama ada dalam bentuk tunai atau mata benda yang diperolehi secara berulang kali dan terakru sama ada secara mingguan, bulanan atau tahunan dan boleh digunakan bagi memenuhi keperluan hidup semasa. Pendapatan isi rumah diukur menggunakan dua (2) indikator utama iaitu penengah dan purata. Pendapatan penengah ialah nilai pertengahan apabila isi rumah disusun secara menaik mengikut nilai terendah hingga nilai tertinggi. Konsep penengah penting bagi menjelaskan perubahan pendapatan isi rumah yang taburannya bersifat tidak normal. Sementara itu, pendapatan purata pula diperolehi dengan menjumlahkan keseluruhan pendapatan isi rumah dan dibahagikan dengan bilangan isi rumah.

3.2.1. Punca Pendapatan

Terdapat empat (4) punca utama pendapatan bagi setiap pendapatan yang diterima oleh sesebuah isi rumah iaitu pendapatan yang diperolehi daripada pekerjaan bergaji, bekerja sendiri, pendapatan daripada harta & pelaburan yang dimiliki dan pendapatan yang diterima melalui pindahan semasa.

Pendapatan yang diperoleh daripada pekerjaan bergaji merangkumi semua pembayaran hasil penglibatan di dalam pekerjaan sama ada berbentuk wang tunai atau mata benda yang diterima oleh individu di dalam sesebuah isi rumah. Antara komponen pendapatan daripada pekerjaan bergaji ialah gaji yang diterima, elaun, bonus, makanan dan tempat tinggal yang diberikan secara percuma oleh majikan.

Pendapatan daripada bekerja sendiri pula adalah pendapatan yang diperoleh di kalangan mereka yang merupakan majikan yang mempunyai pekerja atau mereka yang bekerja sendiri sama ada secara berdaftar atau tidak berdaftar. Keuntungan daripada pelaburan modal rakan kongsi yang tidak bekerja di perusahaan ini adalah tidak termasuk sebagai bekerja sendiri.

Pendapatan daripada harta & pelaburan ialah pendapatan yang diperoleh daripada pemilikan aset yang disediakan untuk kegunaan orang lain. Pendapatan daripada sewaan rumah, bangunan komersial atau sewaan tanah merupakan antara contoh pendapatan daripada harta manakala pendapatan daripada pelaburan adalah termasuk faedah dan dividen daripada simpanan.

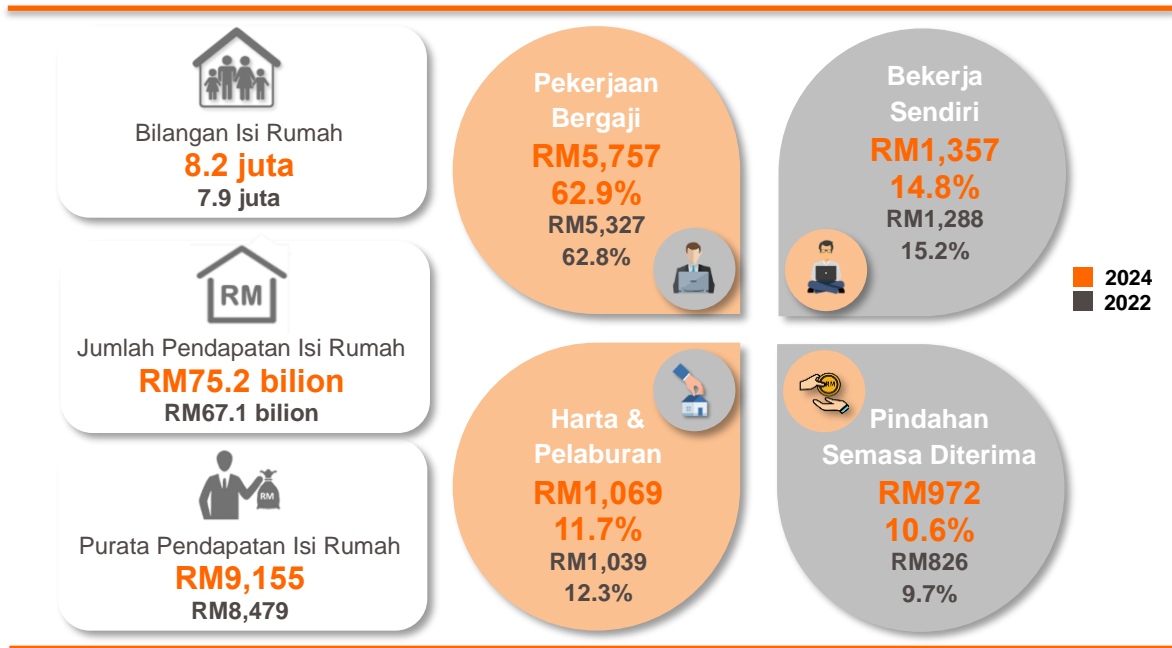

Pendapatan daripada pindahan semasa diterima terdiri daripada wang tunai, barangan atau perkhidmatan dan boleh diterima daripada isi rumah lain, kerajaan atau badan-badan kebajikan sama ada dari dalam atau luar negara. Kiriman wang daripada isi rumah lain, pencen, nafkah dan bantuan yang diterima secara berkala adalah antara contoh pendapatan daripada pindahan semasa diterima.

Namun begitu, penerimaan secara sekali gus (*lump sum*) seperti bayaran persaraan, pengeluaran Kumpulan Wang Simpanan Pekerja (KWSP) dan lain-lain penerimaan hasil daripada kerja yang dilakukan sebelum bersara tidak dianggap sebagai pendapatan kecuali isi rumah terbabit tidak mempunyai punca pendapatan lain. Dalam kes-kes sebegini, pendapatan yang diambil kira adalah amaun yang sama dengan jumlah perbelanjaan yang dibuat oleh isi rumah tersebut bagi tempoh dirujuk.

Dapatan survei menunjukkan sebanyak 62.9 peratus daripada pendapatan isi rumah diperoleh daripada pekerjaan bergaji diikuti oleh pendapatan daripada bekerja sendiri (14.8%), pendapatan daripada harta & pelaburan (11.7%) serta pendapatan melalui pindahan semasa diterima (10.6%) **[Paparan 2]**.

Selain maklumat yang berkaitan dengan demografi dan geografi, survei ini turut menyediakan data pendapatan mengikut sektor pekerjaan isi rumah. Sektor pekerjaan menyumbang kepada kesejahteraan isi rumah melalui peningkatan taraf hidup khususnya dalam kalangan isi rumah miskin. Bagi mencapai keseimbangan antara pembangunan ekonomi dan sosial, pewujudan peluang pekerjaan yang produktif adalah penting dalam usaha membasmi kemiskinan.

Berdasarkan perspektif kelas pendapatan, isi rumah yang diketuai oleh mereka yang bekerja di sektor pertanian dan pembinaan merekodkan peratusan tertinggi bagi isi rumah yang berpendapatan RM2,000 hingga RM3,999 sebulan, masing-masing sebanyak 37.0 peratus dan 18.6 peratus. Sementara itu, sektor perlombongan dan perkhidmatan mencatatkan peratusan tertinggi bagi kumpulan berpendapatan RM4,000 hingga RM5,999 sebulan, iaitu masing-masing 16.5 peratus dan 18.5 peratus. Selain itu, isi rumah yang diketuai oleh mereka yang bekerja di pembuatan merekodkan peratusan tertinggi bagi kelas pendapatan RM6,000 hingga RM7,999 sebulan, iaitu sebanyak 18.7 peratus [Carta 9].

3.2.2.6. Pendapatan Isi Rumah Kasar Bulanan mengikut Kumpulan Isi Rumah

Seiring aspirasi pembangunan negara, Rancangan Malaysia Ketiga Belas (RMK13) memberi penekanan terhadap usaha memupuk keterangkuman sosial dan mengurangkan jurang pendapatan bagi meningkatkan kesejahteraan rakyat secara menyeluruh. Pelaksanaan strategi ini mencerminkan komitmen kerajaan untuk membina Malaysia maju, makmur dan sejahtera melalui pengagihan kekayaan yang adil dan saksama merentas kumpulan pendapatan, etnik dan rantaian ekonomi.

Berdasarkan dapatan survei 2024, had pendapatan bagi kumpulan desil pertama hingga desil keempat (D1-D4), yang merangkumi 3.28 juta isi rumah ialah di bawah RM5,860. Had pendapatan kumpulan desil kelima hingga desil kelapan (D5-D8) yang melibatkan 3.28 juta isi rumah pula adalah di antara RM5,860 hingga RM12,679. Sementara itu, sebanyak 1.64 juta isi rumah tergolong dalam kumpulan desil kesembilan hingga kesepuluh (D9-D10) dengan pendapatan melebihi RM12,679. Dari segi agihan pendapatan, D9-D10 memiliki 45.1 peratus daripada jumlah pendapatan isi rumah berbanding 46.3 peratus pada tahun 2022. Sementara itu, 38.2 peratus dimiliki oleh kumpulan D5-D8 dan selebihnya 16.7 peratus daripada jumlah pendapatan adalah bagi kumpulan D1-D4 [Paparan 7].

Berdasarkan analisis data survei, didapati pendapatan purata bagi kumpulan isi rumah D1-D4 adalah hampir sama dengan pendapatan penengah. Sebaliknya, bagi kumpulan isi rumah D5-D8 dan D9-D10, pendapatan purata adalah lebih tinggi berbanding pendapatan penengah. Secara terperinci, isi rumah D5-D8 merekodkan pendapatan purata sebanyak RM8,744 manakala pendapatan penengah ialah RM8,599. Bagi kumpulan D9-D10 pula, pendapatan purata dan pendapatan penengah masing-masing adalah RM20,662 dan RM16,517. Perbezaan ini menunjukkan agihan pendapatan yang bersifat pencong positif (pencong ke kanan), di mana nilai purata dipengaruhi oleh majoriti isi rumah yang berpendapatan lebih tinggi.

Berdasarkan kepada kelompok desil isi rumah ini, agihan pendapatan daripada kumpulan D1-D4 yang memiliki 16.7 peratus daripada keseluruhan pendapatan isi rumah merupakan perincian daripada D1 yang menyumbang 2.4 peratus daripada jumlah pendapatan, D2 (3.7%), D3 (4.7%) dan D4 (5.8%). Bagi D5-D8 dengan jumlah agihan 38.2 peratus, D5 hanya mencatatkan 7.1 peratus, sementara D8 menyumbang 12.3 peratus daripada jumlah pendapatan. Namun begitu, penelitian pengkelasan isi rumah dan agihan pendapatan sebegini perlu turut mengambil kira saiz isi rumah bagi setiap kumpulan [Jadual 3].

3.2.4. Pendapatan Isi Rumah Benar Kasar Bulanan

Pendapatan isi rumah benar bulanan adalah pendapatan yang diperoleh selepas mengambil kira inflasi yang menggambarkan kuasa beli sebenar isi rumah. Secara umumnya, pendapatan benar mengambil kira harga dan kos sara hidup yang turun naik, biasanya menghasilkan nilai yang lebih rendah dan menunjukkan kuasa perbelanjaan yang berkurangan.

Pendapatan isi rumah benar bulanan penengah pada tahun 2024 adalah RM5,284 berbanding RM4,983 pada tahun 2022 dengan kadar pertumbuhan 2.9 peratus. Dalam tempoh yang sama, pendapatan isi rumah benar bulanan purata meningkat 1.7 peratus kepada RM6,894 (2024) daripada RM6,666 (2022). Kadar pertumbuhan pendapatan kasar purata adalah hampir dua kali ganda berbanding kadar pertumbuhan pendapatan benar purata [Carta 10].

3.2.5. Pendapatan dan Perbelanjaan Penggunaan Isi Rumah

Pendapatan merupakan salah satu faktor penting yang menentukan kuasa beli isi rumah dan mempengaruhi perubahan corak perbelanjaan. Perbelanjaan penggunaan isi rumah bergerak selari dengan pendapatan isi rumah di mana pendapatan yang lebih tinggi menunjukkan perbelanjaan penggunaan isi rumah lebih tinggi. Ini menunjukkan pendapatan dan perbelanjaan penggunaan isi rumah mempunyai korelasi yang positif [Carta 11].

RINGKASAN PENEMUAN

Carta 11: Perbelanjaan dan Pendapatan Isi Rumah Bulanan Purata mengikut Negeri, Malaysia, 2022 dan 2024

Pendapatan isi rumah purata meningkat 3.8 peratus, pendapatan isi rumah boleh guna meningkat 3.2 peratus manakala perbelanjaan penggunaan isi rumah purata bagi warganegara Malaysia meningkat sebanyak 3.9 peratus pada tahun 2024. Kesemua negeri menunjukkan kadar pertumbuhan perbelanjaan melebihi pendapatan isi rumah, kecuali Johor, Pulau Pinang, Selangor dan W.P. Kuala Lumpur yang merekodkan kadar pertumbuhan pendapatan melebihi perbelanjaan penggunaan isi rumah **[Jadual 7]**.

Secara purata, isi rumah menggunakan sebanyak 74.5 peratus daripada pendapatan boleh guna untuk membiayai perbelanjaan penggunaan. Kebanyakan negeri mencatatkan peratusan perbelanjaan penggunaan melebihi 70.0 peratus daripada pendapatan boleh guna. Walau bagaimanapun, tiga negeri merekodkan peratusan perbelanjaan penggunaan kurang daripada 70 peratus daripada pendapatan boleh guna iaitu Selangor (69.1%), Sabah (63.7%) dan W.P. Labuan (68.3%).

3.2.6. Pendapatan Negara Kasar per Kapita dan Pendapatan Isi Rumah per Kapita

Keluaran Dalam Negeri Kasar (KDNK) merujuk kepada keseluruhan pendapatan yang diterima dalam negara termasuk pampasan pekerja, lebih kendalian kasar dan cukai bersih yang dipengaruhi oleh perkembangan sektor ekonomi. Peningkatan dalam pendapatan negara kasar per kapita menggambarkan pertumbuhan ekonomi yang dilihat boleh memberi manfaat kepada isi rumah. Keseluruhan tahun 2024, ekonomi Malaysia melonjak 5.1 peratus (RM1,650.3 bilion) berbanding 3.5 peratus (RM1,570.1 bilion) pada tahun 2023.

Pendapatan negara kasar per kapita Malaysia bagi tahun 2024 adalah RM54,793 setahun atau RM4,566 sebulan, peningkatan sebanyak 16.0 kali ganda daripada RM3,434 (sebulan: RM286) yang direkodkan pada tahun 1979. Pendapatan isi rumah pula mencatatkan nilai purata bulanan sebanyak RM9,155 pada tahun 2024 berbanding RM678 pada tahun 1979. Dari segi per kapita, nilai pendapatan purata per kapita bulanan adalah RM2,973 pada tahun 2024, meningkat 22.4 kali ganda berbanding RM133 pada tahun 1979. Data ini menunjukkan bahawa peningkatan pendapatan isi rumah meningkat selari dengan peningkatan pendapatan negara kasar per kapita [Carta 13].

*Pendapatan negara kasar per kapita bulanan (RM) dikira semula berdasarkan pendapatan negara kasar per kapita bagi tahun tersebut dibahagikan dengan 12 bulan

3.2.7. Pendapatan Isi Rumah dan Inflasi

Indeks Harga Pengguna (IHP) mengukur kadar perubahan harga mengikut masa bagi “bakul” tetap barangan dan perkhidmatan yang mewakili corak purata pembelian oleh sekumpulan penduduk pada sesuatu tempoh masa yang ditetapkan. Inflasi diukur melalui perubahan peratus tahunan IHP. Peningkatan harga barangan akan meningkatkan nilai IHP mengikut pemberat yang telah ditetapkan.

Bulíř (2001) menyatakan bahawa inflasi adalah faktor yang mempengaruhi taburan pendapatan¹. Sekiranya kadar inflasi adalah lebih tinggi berbanding dengan kadar peningkatan pendapatan, ini menunjukkan bahawa isi rumah boleh berada dalam situasi kekangan pendapatan untuk membeli barangan dan sebaliknya.

Dapatan menunjukkan kadar pertumbuhan pendapatan purata isi rumah kasar pada tahun 2024 (3.8%) melebihi kadar inflasi tahunan (1.8%). Walaupun peningkatan kadar inflasi pada tahun tersebut dipacu oleh faktor seperti kenaikan harga makanan dan minuman, kos bahan mentah serta perbelanjaan perumahan, utiliti, gas dan bahan api, pertumbuhan pendapatan yang lebih tinggi berbanding inflasi telah sedikit sebanyak memberi kesan terhadap kuasa beli isi rumah. Keadaan ini seterusnya membolehkan isi rumah memberi tumpuan kepada

Carta 14: Kadar Pertumbuhan Pendapatan Purata Isi Rumah dan Kadar Inflasi, Malaysia, 1995 - 2024

1. INTRODUCTION

Malaysia in 2024 maintained stable socioeconomic performance, supported by growth in nearly all key economic sectors and the gradual recovery of the global market environment. The country's population was 33.4 million, with an ageing demographic structure that directly influenced household spending patterns, healthcare needs, and social services.

From a macroeconomic perspective, Gross Domestic Product (GDP) grew by 5.1 per cent in 2024, supported by continued growth in private final consumption expenditure, which also expanded by 5.1 per cent. Inflation remained moderate at 1.8 per cent throughout the year, helping to preserve the people's purchasing power and easing cost of living pressures. This achievement was further reinforced by the stability of global commodity markets and the effectiveness of domestic price management measures.

The nation's economic performance was supported by positive developments in the external trade sector. Malaysia's exports grew by 5.8 per cent in 2024, driven by electrical and electronic (E&E) products, oil and gas, as well as robust growth in services exports, thereby strengthening the country's position in the open market. Imports also increased by 13.1 per cent, particularly in the categories of intermediate goods, capital goods, and consumer goods, reflecting active domestic production and household confidence in the economic outlook.

The labour force participation rate increased to 70.6 per cent in 2024, while the unemployment rate recorded 3.2 per cent, lower than the 3.4 per cent recorded in 2023. The average monthly salaries and wages of citizens reached RM3,652 in 2024, with compensation of employees contributing 33.6 per cent to GDP in 2024. This was supported by the implementation of the new minimum wage as well as the progressive wage mechanism, which strengthened household income, particularly for the low and middle-income groups.

Therefore, Malaysia's socioeconomic landscape in 2024 remained on a positive trajectory, with stable GDP growth, controlled inflation, a robust labour market, and a balanced trade position. These favourable developments provided a strong foundation for the nation to enter a new phase of development under the Thirteenth Malaysia Plan (RMK13), particularly in strengthening the people's well-being and enhancing the country's global economic competitiveness.

2. SURVEY BACKGROUND

The Department of Statistics Malaysia (DOSM) conducted the Household Income and Basic Amenities (HIS & BA) Survey in 2024 to assess the current distribution of household income, poverty incidence and income inequality. This survey was conducted using a probability sampling that represents 8.2 million Malaysian citizen households in 2024. The selected sample was based on a list of living quarters obtained from the Population and Housing Census of Malaysia conducted in 2020. Data collection was conducted through face-to-face interviews, making the 2024 survey the 21st round since its inception in 1974.

This report presents a comprehensive analysis of the distribution of household income among Malaysian citizens. The survey findings are widely utilised for more in-depth socioeconomic research and are consistent with international best practices, with reference to the Canberra Group Handbook on Household Income Statistics, Second Edition, published by the United Nations in 2011.

3. SURVEY FINDINGS

3.1. CHARACTERISTICS OF HOUSEHOLD AND URBANISATION

3.1.1. Household Size and Number of Income Recipients

There were 8.7 million households in Malaysia in 2024, of which 8.2 million were citizen households. A total of 98.2 per cent were related households, while 1.8 per cent were unrelated households. Each household has its own size, referring to the number of persons in the household. On average, the household size in Malaysia was 3.7 persons in 2024, compared to 3.8 persons in 2022 [Chart 1]. The average household size in urban was 3.6 persons (2022: 3.7 persons), as compared to 3.9 persons for households living in rural areas (2022: 4.0 persons).

SUMMARY OF FINDINGS

Chart 1: Number and Average Household Size, Malaysia, 1995 - 2024

In terms of percentage, one-person households in 2024 comprised 8.5 per cent of all households as compared to 8.0 per cent in 2022. Two-person households comprised 21.0 per cent. Meanwhile, three- and four-person households comprised 21.4 per cent and 20.8 per cent, respectively, while households with five persons and more comprised 28.3 per cent.

A total of 44.8 per cent of households had only one income recipient, of which 15.4 per cent were households with four and more persons. Meanwhile, 40.1 per cent of households had two income recipients, followed by households with three income recipients (11.2%) and those with four and more income recipients (4.0%) [Table 1].

3.1.2. Urbanisation Rate

Urbanisation refers to the transformation process of an area from rural to urban. Urbanisation also occurred when urban settlements become larger and more complex. Urbanisation of a city requires a comprehensive and uniform guidance to develop. The 4th National Physical Plan targets the country's urbanisation rate to reach 85.0 per cent by 2040. The urbanisation rate in Malaysia is estimated at 76.0 per cent in 2024 as compared to 70.9 per cent in 2010 [Exhibit 1].

Exhibit 1: Urbanisation Rate in Malaysia, 2010 - 2024

Note: Urbanisation rate refers to the number of populations living in urban areas

According to the Household Income Survey 2024, 77.9 per cent of households in Malaysia live in urban areas. At the state level, Selangor, Pulau Pinang, W.P. Labuan, Melaka, and Johor recorded household proportions exceeding the national level, ranging from 79.3 per cent to 95.8 per cent. Meanwhile, Sarawak, Perlis, Pahang, and Kelantan recorded lower urban household proportions at less than 60.0 per cent [Chart 2].

3.2. HOUSEHOLD INCOME

Household income refers to the amount of income received by household members, whether in the form of monetary or in-kind that is earned at frequent intervals and accrued either on a weekly, monthly or yearly and are available for current consumption. Household income is measured using two (2) main indicators which are the median and the mean. The median income refers to the middle value when income is arranged in ascending order from the lowest value to the highest value. The concept of median explains the non-normal distribution of household income. Meanwhile, the mean income is obtained by summing the total household income and dividing by the number of households.

3.2.1. Sources of Income

There are four (4) main sources of income received by a household, which are income obtained from paid employment, self-employed, income from property & investments owned and current transfers received.

Income from paid employment comprises all payments received from participation in employment, whether monetary or in-kind, received by individuals in a household. Components of income from paid employment include wages, allowances, bonuses, as well as free food and accommodation provided by the employer.

SUMMARY OF FINDINGS

Income from self-employed is described by income obtained by those who employ workers or those who are self-employed either registered or unregistered. Profits from capital investment of partners who are not actively engaged in the enterprise are not classified as self-employed.

Income from property & investment is defined as receipts that arise from the ownership of assets provided to others for their use. Income from the rental of houses, commercial buildings, or land is an example of property income, while income from investments includes interest and dividends from savings.

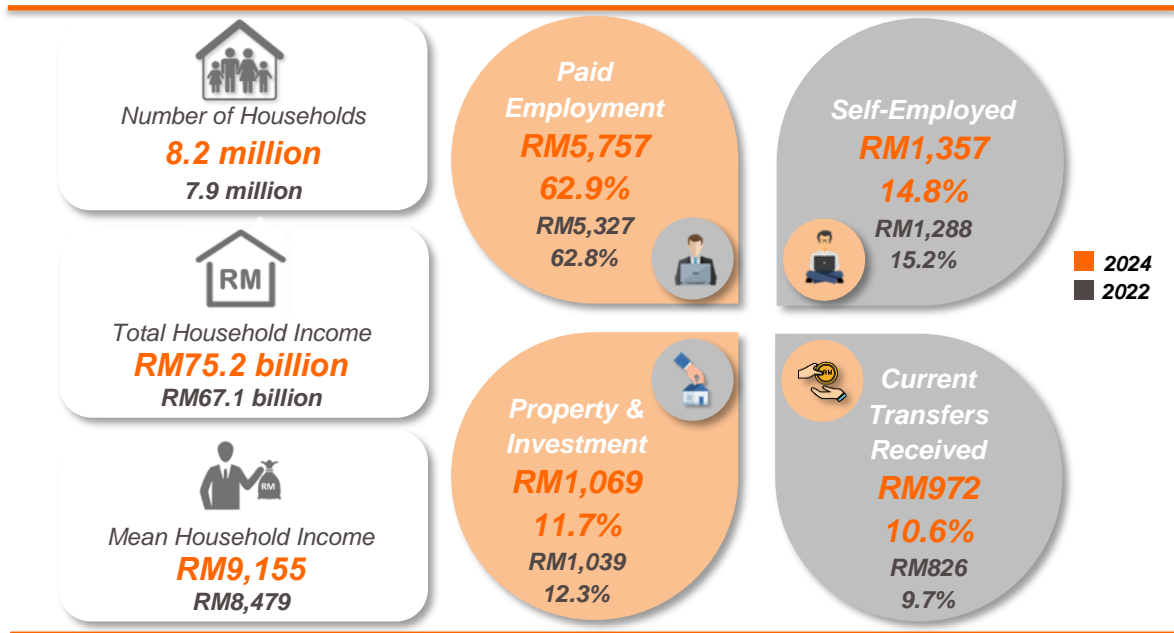

Income from current transfers received consists of cash, goods or services and may be received from other households, the government or charities, both within or outside the country. Remittances, pensions, alimony and other assistance received periodically are among examples of income from current transfers received.

However, lump sum receipts such as retirement payments, Employee Provident Fund (EPF) withdrawals and other receipts of remuneration from work before retirement were not considered as income unless the household involved has no other source of income. In such cases, the income considered was equivalent as the total consumption made by the household during the reference period.

The survey findings indicate that 62.9 per cent of the total household income was derived from paid employment followed by income from self-employed (14.8%), income from property & investment (11.7%), and income from current transfers received (10.6%) **[Exhibit 2].**

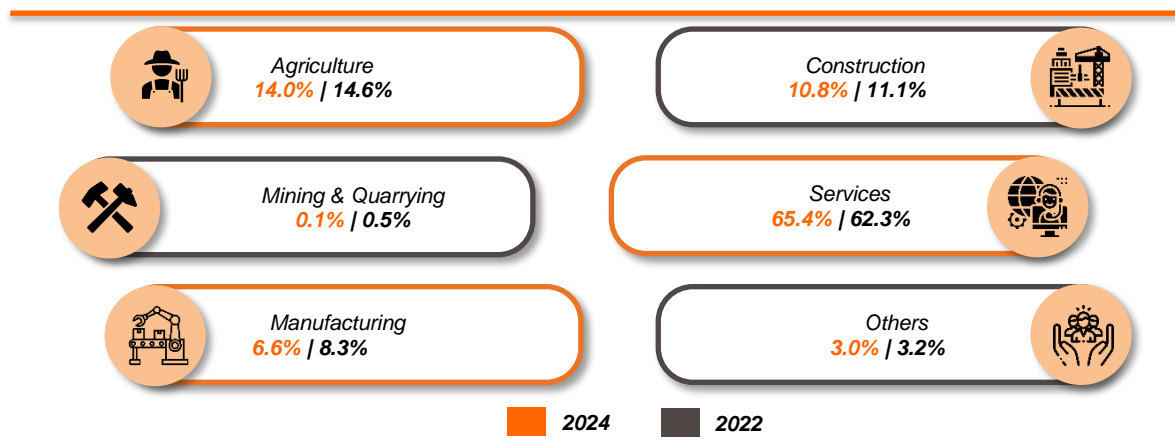

SUMMARY OF FINDINGS

Exhibit 2: Composition of Monthly Household Gross Income by Sources of Income, Malaysia, 2022 and 2024

For self-employment income in 2024, the composition of income obtained from the services sector increased to 65.4 per cent (2022: 62.3%). In contrast, the agriculture sector recorded 14.0 per cent (2022: 14.6%), mining & quarrying 0.1 per cent (2022: 0.5%), manufacturing 6.6 per cent (2022: 8.3%), construction 10.8 per cent (2022: 11.1%), and others 3.0 per cent (2022: 3.2%), all of which declined compared to 2022 [Exhibit 3].

Exhibit 3: Percentage of Income by Sources of Income from Self-employed, Malaysia, 2022 and 2024

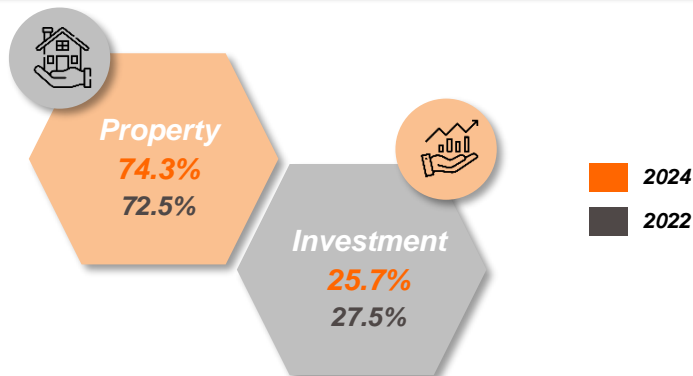

Note: Others refers to sector not elsewhere classified

SUMMARY OF FINDINGS

Income from property includes income from imputed rent of owner-occupied dwelling, renting of house or other properties, as well as land rent, while income from investment is derived from dividends and interest. The composition of income obtained from property in 2024 increased to 74.3 per cent (2022: 72.5%) and the composition of income obtained from investment showed a decrease from 27.5 per cent in 2022 to 25.7 per cent in 2024 [Exhibit 4].

Exhibit 4: Percentage of Income by Sources of Income from Property & Investment, Malaysia, 2022 and 2024

For income from current transfer received in 2024, remittances received from other households recorded the highest percentage contribution of 48.7 per cent, followed by pensions (30.8%) and government's assistance such as aid received from Welfare Department, household living aid, school assistance and gifts in the form of cash or in-kind (13.3%) [Exhibit 5].

Exhibit 5: Percentage of Income by Sources of Income from Current Transfers Received, Malaysia, 2022 and 2024

SUMMARY OF FINDINGS

Sources of income may also serve as a guide to strengthen the monitoring of government's assistance to targeted group. Income from current transfers received by households with income lower than RM2,000 recorded an increase from 49.2 per cent in 2022 to 56.0 per cent in 2024. Besides, this current transfer increase particularly among households in income class between RM2,000 to RM3,999 and between RM4,000 to RM5,999, at 34.0 per cent and 20.2 per cent, respectively. Overall, the percentage of current transfers received decreased in higher income bracket, thus indicates less dependency on current transfers received for the said group [Table 2].

3.2.2.6. Monthly Household Gross Income by Household Group

In line with the nation’s development aspirations, the Thirteenth Malaysia Plan (RMK13) emphasises on promoting social inclusivity and reducing income disparities to elevate the overall well-being of the population. This initiative reflects the government’s commitment to building a developed, prosperous, and harmonious Malaysia through fair and equitable wealth distribution across income groups, ethnicities, and economic supply chains.

Findings from the 2024 survey indicated that the income threshold for the first to fourth decile group (D1-D4), consisting of 3.28 million households was below RM5,860. For the fifth to eighth decile group (D5-D8) the income threshold involving 3.28 million households was between RM5,860 to RM12,679. Meanwhile, there were 1.64 million households in the ninth to tenth decile group (D9-D10) with incomes exceeding RM12,679. In terms of income distribution, the D9-D10 constituted 45.1 per cent of total household income, compared to 46.3 per cent in 2022. At the same time, 38.2 per cent was held by the D5-D8 group, while the remaining 16.7 per cent was for the D1-D4 group [Exhibit 7].

SUMMARY OF FINDINGS

Exhibit 7: Income Structure by Household Group, Malaysia, 2022 and 2024

Note: Total may differ due to rounding
CAGR refers to the Compounded Annual Growth Rate

Based on the survey data analysis, it was found that the mean income of households in the D1-D4 group was nearly similar to the median income. In contrast, for households in the D5-D8 and D9-D10 groups, the mean income was higher than the median income. Specifically, households in the D5-D8 group recorded a mean income of RM8,744 compared to a median income of RM8,599. For the D9-D10 group, the mean and median incomes were RM20,662 and RM16,517, respectively. This difference indicates a positively skewed (skewed to the right) income distribution, where the mean value is influenced by the majority of households with higher incomes.

SUMMARY OF FINDINGS

Based on the household deciles, the income share of the D1-D4 group which held 16.7 per cent of total household income comes from D1 with 2.4 per cent of total income, D2 (3.7%), D3 (4.7%) and D4 (5.8%). For D5-D8 with 38.2 per cent of the total distribution, D5 recorded only 7.1 per cent, while D8 contributed 12.3 per cent of total income. However, the details on household classification and income distribution should also take into consideration the household size in each group [Table 3].

SUMMARY OF FINDINGS

3.2.4. Monthly Household Gross Real Income

Monthly household real income is the income obtained after accounting for inflation which reflects the purchasing power of the household. In general, real income considers the fluctuation of prices and costs of living, usually resulting in lower values and indicating a decrease in spending power.

The median monthly household real income in 2024 was RM5,284 as compared to RM4,983 in 2022 with a growth rate of 2.9 per cent. At the same time, the mean monthly household real income increased 1.7 per cent to RM6,894 (2024) from RM6,666 (2022). The growth rate of mean gross income was almost two times than the growth rate of mean real income [Chart 10].

3.2.5. Household Income and Consumption Expenditure

Income is one of the important factors in determining household purchasing power and changes in expenditure patterns. Household consumption expenditure moved in tandem with household income wherein higher income indicates higher household consumption expenditure. This depicts that household income and expenditure were positively correlated [Chart 11].

Chart 11: Mean of Monthly Household Expenditure and Income by State, Malaysia, 2022 and 2024

* Refers to consumption expenditure of Malaysian citizens only

SUMMARY OF FINDINGS

Mean household income increased 3.8 per cent, disposable household income rose 3.2 per cent while mean household expenditure for Malaysian citizens grew by 3.9 per cent in 2024. All states showed that the household consumption expenditure growth was above its income, except for Johor, Pulau Pinang, Selangor, and W.P. Kuala Lumpur with income growth rate higher than consumption expenditure growth rate [Table 7].

On average, households consumed 74.5 per cent of its disposable income to support its consumption expenditure. Most states registered a percentage of consumption expenditure over 70.0 per cent of its disposable income. However, three states recorded a percentage of consumption expenditure lower than 70.0 per cent of its disposable income, namely Selangor (69.1%), Sabah (63.7%) and W.P. Labuan (68.3%).

The survey findings also depicted 21.8 per cent of households in Malaysia earned below RM4,000 with a majority in the income class between RM2,000 to RM3,999, followed by household with the income class between RM4,000 to RM5,999 with 19.5 per cent. The percentage of households spending less than RM4,000 per month was 35.9 per cent. All expenditure classes recorded an increase in the percentage of households except for the RM8,000 to RM9,999, RM2,000 to RM3,999, and below RM2,000 classes. At the same time, the RM18,000 to RM19,999 class remained unchanged at the same percentage (0.3%) [Chart 12].

3.2.6. Gross National Income per Capita and Household Income per Capita

Gross Domestic Product (GDP) refers to the total income received in the country including compensation of employees, gross operating surplus and net taxes which is influenced by the growth of economic sectors. An increase in gross national income per capita indicates the economic growth and may be benefited the households. Overall for the year 2024, Malaysia's economy surged to 5.1 per cent (RM1,650.3 billion) as compared to 3.5 per cent (RM1,570.1 billion) in 2023.

Malaysia's gross national income per capita for 2024 was RM54,793 per year or RM4,566 per month, increased 16.0 times from RM3,434 (per month: RM286) recorded in 1979. Household income, on the other hand, registered an average monthly of RM9,155 in 2024 as compared to RM678 in 1979. In terms of per capita, the average monthly income per capita was RM2,973 in 2024, up 22.4 times as compared to RM133 in 1979. The data also indicates that the increase in household income was consistent with the increase in gross national income per capita [Chart 13].

SUMMARY OF FINDINGS

Chart 13: Mean of Monthly Household Gross Income and Monthly Gross National Income per Capita, Malaysia, 1979 - 2024

*Monthly gross national income per capita (RM) was recalculated based on gross national income per capita for the year divided by 12 months

3.2.7. Household Income and Inflation

The Consumer Price Index (CPI) measures the rate of change over time for a fixed 'basket' of goods and services that represents the average pattern of purchase by the group of people over a given time period. Inflation is measured by the annual percentage change in the CPI. Increasing price in goods and services will increase the value of CPI in accordance with its specified weight.

Bulíř (2001) stated that inflation as a factor affecting income distribution¹. If the inflation rate is higher than the household income, it indicates that the household may be facing the situation of reduced real income and less purchasing power and vice versa.

The findings revealed that the growth rate of average household gross income in 2024 (3.8%) exceeded the annual inflation rate (1.8%). Although the increase in inflation during the year was driven by factors such as higher prices of food and beverages, raw material costs, as well as expenditure on housing, utilities, gas, and fuel, the faster pace of income growth compared to inflation has strengthened household purchasing power. This, in turn, enabled households to focus on essential spending, thereby supporting sustainability and well-being in navigating economic uncertainties [Chart 14].

HOUSEHOLD INCOME SURVEY REPORT

2024

Muka surat ini sengaja dibiarkan kosong
This page is deliberately left blank

1. PENGENALAN

Statistik yang diterbitkan dalam laporan ini adalah berdasarkan Survei Pendapatan Isi Rumah dan Kemudahan Asas (HIS & BA) 2024 yang dijalankan oleh Jabatan Perangkaan Malaysia (DOSM). Survei yang dilaksanakan dua kali dalam tempoh lima tahun ini menyediakan data pendapatan dan kemiskinan bagi **isi rumah warganegara** sahaja. Nota teknikal ini merangkumi penerangan yang lebih terperinci bagi membantu pengguna untuk memahami dengan lebih mendalam berkaitan survei dan laporan ini.

2. OBJEKTIF SURVEI

2.1 Objektif utama survei adalah seperti yang berikut:

- a) mengumpul maklumat pola taburan pendapatan isi rumah;
- b) mendapatkan statistik terkini berkaitan dengan isi rumah miskin; dan
- c) mengenal pasti capaian kemudahan asas yang dinikmati oleh isi rumah.

2.2 Data daripada survei ini digunakan terutamanya oleh agensi kerajaan sebagai input dalam perancangan, pembentukan pelan pembangunan negara dan pemantauan Rancangan Malaysia Kedua Belas (RMKe-12). Statistik ini juga menjadi rujukan penting kepada ahli ekonomi, ahli akademik, pihak swasta dan individu bagi keperluan penyelidikan dan analisis yang lebih terperinci.

3. KAEDAH PENGUMPULAN DATA

3.1 Pengumpulan data dijalankan dengan menggunakan kaedah temu ramah bersemuka. Pegawai dan anggota DOSM yang terlibat dalam survei ini diberikan latihan khusus sebagai penemuramah. Mereka akan melawat Isi Rumah (IR) di Tempat Kediaman (TK) terpilih bagi mengumpul maklumat berkaitan demografi dan pendapatan dengan menggunakan borang soal selidik.

3.2 Semakan kualiti data dibuat oleh pegawai berpengalaman dari DOSM Negeri bagi mengesan dan membetulkan sebarang kesilapan atau maklumat yang tertinggal ketika survei dilaksanakan. Proses semakan semula di lapangan juga dilaksanakan bagi isi rumah terpilih untuk memastikan data yang dipungut adalah berkualiti.

4. TEMPOH RUJUKAN

Maklumat pendapatan isi rumah yang dikumpul adalah bagi tempoh dua belas bulan yang lalu. Sebagai contoh, bagi survei bulan Disember 2024, maka pendapatan isi rumah yang dikira adalah dari 1 Disember 2023 sehingga 30 November 2024.

5. SKOP DAN LIPUTAN

5.1 Survei ini meliputi negeri, strata (bandar dan luar bandar) dan daerah pentadbiran di Malaysia.

5.2 Liputan survei ini adalah isi rumah yang tinggal di **TK persendirian** sahaja dan tidak termasuk mereka yang tinggal di tempat kediaman institusi seperti asrama, hotel, hospital, rumah orang tua, penjara dan rumah kebajikan.

6. KONSEP DAN DEFINISI

6.1 Tempat Kediaman

Tempat Kediaman adalah suatu struktur yang dibina berasingan dan bebas yang lazimnya digunakan untuk tempat tinggal. Takrifan perkataan **berasingan** dan **bebas** adalah seperti berikut:

a) Berasingan

Struktur dianggap sebagai berasingan jika ia dikelilingi sama ada dinding, pagar atau sebagainya serta ditutupi oleh bumbung.

b) Bebas

Struktur dikatakan bebas apabila ia mempunyai jalan masuk terus dari laluan umum, tempat lalu lintas atau ruang lapang (iaitu penghuni boleh masuk atau keluar dari tempat kediaman mereka tanpa melalui pekarangan orang lain).

6.2 Isi Rumah

Sesebuah isi rumah dikategorikan sebagai isi rumah warganegara apabila ketua isi rumah adalah warganegara Malaysia. Isi rumah ditakrifkan sebagai seorang atau sekumpulan orang yang bersaudara atau orang yang tidak bersaudara yang biasanya tinggal bersama dan membuat peruntukan yang sama untuk makanan dan keperluan hidup yang lain.

6.3 Ketua Isi Rumah

Ketua isi rumah ditakrifkan sebagai seorang ahli biasa sama ada lelaki atau perempuan yang dianggap sebagai ketua oleh ahli isi rumah yang lain. Ketua isi rumah mesti seorang penerima pendapatan yang berumur 15 tahun dan lebih.

6.4 Pendapatan

Maklumat pendapatan yang terperinci diperoleh daripada ahli isi rumah yang menerima pendapatan. Konsep dan definisi pendapatan yang digunakan dalam survei ini adalah merujuk kepada *Canberra Group Handbook on Household Income Statistics, Second Edition, 2011* yang diterbitkan oleh *United Nations*. Punca pendapatan adalah merangkumi:

a) Pekerjaan Bergaji

Pendapatan daripada pekerjaan bergaji boleh diterima dalam bentuk wang tunai atau dalam bentuk barangan dan perkhidmatan. Ini termasuk upah dan gaji untuk masa bekerja dan kerja yang dilakukan; bonus tunai dan ganjaran; komisen dan tips; elaun; bonus perkongsian keuntungan dan lain-lain bentuk pembayaran keuntungan yang berkaitan dan barangan & perkhidmatan percuma atau subsidi daripada majikan (termasuk makanan percuma/konsesi).

Dari segi konsep, pendapatan pekerja juga termasuk insurans sosial sumbangan daripada majikan, pencaruman majikan kepada Kumpulan Wang Simpanan Pekerja (KWSP) dan bayaran pampasan pemberhentian & penamatan (kecuali bayaran persaraan *one-off* seperti gratuiti bagi pesara, yang dianggap sebagai pindahan modal).

b) Bekerja Sendiri

Pendapatan yang diterima oleh individu hasil daripada bekerja sendiri. Pendapatan bersih daripada bekerja sendiri termasuk keuntungan atau kerugian yang terakru kepada pemilik atau rakan kongsi atau mereka yang bekerja dalam perusahaan yang tidak diperbadankan. Ia juga termasuk anggaran nilai barangan dan perkhidmatan yang diperoleh melalui pertukaran barang serta barangan atau tanaman/ ternakan yang dihasilkan untuk kegunaan sendiri, setelah ditolak perbelanjaan.

Asas untuk mengukur pendapatan daripada bekerja sendiri dalam statistik pendapatan isi rumah adalah berdasarkan konsep pendapatan bersih iaitu

nilai output kasar ditolak kos operasi dan selepas pelarasan bagi susut nilai aset yang digunakan dalam pengeluaran. Keuntungan berlaku apabila pendapatan adalah lebih besar daripada perbelanjaan operasi, manakala kerugian berlaku apabila perbelanjaan operasi adalah lebih besar daripada penerimaan.

c) Harta & Pelaburan

Pendapatan daripada harta & pelaburan adalah terimaan daripada pemilikan aset, faedah, dividen dan sewa. Perincian adalah seperti berikut:

- Pendapatan daripada harta benda ditakrifkan sebagai pulangan daripada penggunaan atau pelaburan aset yang disediakan kepada orang lain untuk kegunaan mereka. Ia merangkumi pulangan yang biasanya dalam bentuk kewangan, daripada aset kewangan (faedah dan dividen), aset bukan kewangan (sewa) dan royalti;
- Penerimaan faedah ialah bayaran yang diterima daripada akaun bank atau institusi kewangan yang lain, perakuan deposit, bon kerajaan/ pinjaman, sekuriti, debentur dan pinjaman kepada ahli-ahli bukan isi rumah;
- Dividen adalah penerimaan daripada pelaburan dalam sebuah syarikat di mana pelabur tidak terlibat dengan aktiviti syarikat. Ini termasuk *silent partner*. Ia juga termasuk pencen dan anuiti dalam bentuk dividen daripada skim insurans swasta;
- Sewa ialah bayaran yang diterima untuk penggunaan aset seperti tanah dan rumah;
- Royalti adalah pendapatan yang diperoleh daripada perkhidmatan bahan dipatenkan atau hak cipta, contohnya seperti hak penulisan, hak cipta bagi gubahan lagu dan lain-lain; dan
- Sewa dinilai bagi rumah sendiri yang diduduki oleh pemiliknya.

d) Pindahan Semasa Diterima

Pindahan boleh terdiri daripada wang tunai, barangan atau perkhidmatan. Pindahan boleh dibuat antara isi rumah ke isi rumah yang lain, antara kerajaan dan isi rumah, atau antara isi rumah dan badan-badan amal. Penerimaan boleh daripada dalam atau luar negara. Pindahan Semasa ini adalah

bermotivasikan pengagihan semula pendapatan sama ada oleh kerajaan (contoh: bantuan pendidikan, zakat, Sumbangan Tunai Rahmah (STR) dan Sumbangan Asas Rahmah (SARA)) atau persendirian/ swasta (contoh: program bantuan sosial korporat).

Pindahan Semasa yang diterima secara langsung memberi kesan kepada tahap Pendapatan Kasar dan mempengaruhi penggunaan barangan dan perkhidmatan. Justeru, semua Pindahan Semasa yang diterima dalam bentuk wang tunai dan barangan atau perkhidmatan adalah dianggap sebagai sebahagian daripada pendapatan. Walau bagaimanapun, Pindahan Semasa tersebut tidak meliputi pindahan modal.

6.5 Pendapatan Kasar dan Pendapatan Boleh Guna

Pendapatan kasar dan pendapatan boleh guna merupakan dua konsep utama pendapatan yang diguna pakai di dalam laporan ini dan boleh ditakrifkan seperti berikut:

a) Pendapatan Kasar

Pendapatan kasar adalah jumlah pendapatan yang diperoleh oleh isi rumah daripada semua punca pendapatan seperti yang dinyatakan di perkara 6.4.

b) Pendapatan Boleh Guna

Pendapatan boleh guna adalah pendapatan kasar isi rumah setelah ditolak pindahan semasa yang dibayar seperti cukai langsung, sumbangan kepada isi rumah lain, bayaran zakat dan pindahan semasa lain yang dibayar serta pindahan semasa yang diterima secara mata benda (*in-kind*). Konsep pendapatan boleh guna ini mencerminkan pendapatan sebenar isi rumah terhadap penggunaan semasa dan simpanan.

Bagi tujuan survei ini, kesan taburan perbelanjaan awam (*collective expenditure*) tidak diambil kira kerana kesukaran untuk menilai faedah yang diperoleh sebagai sebahagian daripada pendapatan isi rumah.

6.6 Pendapatan Isi Rumah

Pendapatan isi rumah ialah jumlah pendapatan yang biasanya diterima (terakru) oleh ahli isi rumah, dalam bentuk wang tunai atau barangan yang diterima berulang kali dalam tempoh rujukan survei (jangka masa setahun atau lebih kerap).

6.7 Penerima Pendapatan

Penerima pendapatan merujuk kepada ahli isi rumah yang menerima pendapatan daripada mana-mana punca (seperti perkara 6.4) dalam tempoh rujukan. Satu isi rumah boleh mempunyai lebih daripada seorang penerima pendapatan.

6.8 Kumpulan Etnik

Kumpulan etnik warganegara Malaysia dikategorikan seperti berikut:

- a) Bumiputera;
- b) Cina;
- c) India; dan
- d) Lain-lain.

6.9 Sijil tertinggi diperoleh

Merujuk kepada sijil tertinggi diperoleh daripada institusi pendidikan awam atau swasta yang menyediakan pendidikan rasmi. Sijil tertinggi diperoleh dikelaskan mengikut *International Standard Classification of Education* (ISCED):

a) PMR atau yang Setaraf

Merujuk kepada Penilaian Menengah Rendah, Sijil Rendah Pelajaran, *Lower Certificate of Education*, Sijil Rendah Agama, Pentaksiran Tingkatan Tiga atau yang setaraf.

b) SPM atau yang Setaraf

Merujuk kepada Sijil Pelajaran Malaysia atau yang setaraf (*Senior Cambridge Certificate, GCE O Level* dan Sijil Pelajaran Vokasional Malaysia). Termasuk sijil kemahiran asas yang diperoleh daripada institusi latihan kemahiran khusus dan teknikal yang mana tempoh pengajian adalah sekurang-kurangnya enam bulan seperti sijil GIATMARA.

c) STPM atau yang Setaraf

Merujuk kepada Sijil Tinggi Persekolahan Malaysia, *Higher School Certificate*, atau kelulusan yang setaraf (Sijil Tinggi Agama dan *GCE A Level*).

d) Sijil

Merujuk kepada sijil diperoleh daripada kolej, politeknik atau institusi-institusi lain yang menawarkan pendidikan rasmi. Tempoh pensijilan adalah tidak kurang dari enam bulan.

e) Diploma

Merujuk kepada diploma dan sijil setaraf dengannya yang diperoleh daripada universiti, kolej, maktab atau politeknik sebelum peringkat ijazah.

f) Ijazah

Merujuk kepada ijazah (Ijazah Sarjana Muda, Sarjana atau Doktor Falsafah) yang diperoleh daripada institusi pengajian tinggi awam atau swasta atau yang setaraf.

g) Tiada Sijil

Merujuk kepada mereka yang masih bersekolah atau telah tamat persekolahan tanpa memperoleh sebarang sijil.

6.10 Pekerjaan

Pekerjaan dikelaskan mengikut klasifikasi Piawaian Pengelasan Pekerjaan Malaysia (MASCO) 2020 yang dibangunkan oleh Kementerian Sumber Manusia (KSM) berasaskan Piawaian Pengelasan Pekerjaan Antarabangsa (ISCO: *International Standard Classification of Occupations*).

Bagi seseorang yang mempunyai lebih daripada satu pekerjaan, hanya pekerjaan yang mengambil masa yang terbanyak semasa tempoh rujukan dianggap sebagai pekerjaan utamanya. Jika masa bekerja setiap pekerjaan itu sama, maka pekerjaan yang menghasilkan pendapatan yang tertinggi adalah pekerjaan utamanya. Dalam kes di mana tempoh bekerja dan pendapatannya adalah sama bagi setiap pekerjaan, pekerjaan di mana dia telah bekerja paling lama dianggap sebagai pekerjaan utamanya.

6.11 Industri

Industri bagi pekerjaan utama seseorang dikelaskan mengikut Piawaian Klasifikasi Industri Malaysia (MSIC) 2008 yang berasaskan kepada *International Standard Industrial Classification of All Economic Activities (ISIC) Revision 4*.

7. RANGKA PENSAMPELAN

7.1 Rangka yang digunakan bagi pemilihan sampel HIES & BA 2024 adalah berdasarkan Rangka Pensampelan Isi Rumah yang terdiri daripada Blok Penghitungan (BP) yang diwujudkan untuk Banci Penduduk dan Perumahan Malaysia 2020 yang dikemaskini dari semasa ke semasa. BP merupakan suatu kawasan muka bumi yang diwujudkan untuk tujuan pelaksanaan operasi survei

yang secara puratanya mengandungi antara 80 hingga 120 TK. Semua BP dibentuk di dalam lingkungan sempadan yang diwartakan iaitu di dalam daerah pentadbiran, mukim atau kawasan pihak berkuasa tempatan.

- 7.2** BP dalam rangka pensampelan dikelaskan mengikut kawasan bandar dan luar bandar. Kawasan bandar ditakrif sebagaimana yang telah digunakan dalam Banci Penduduk dan Perumahan Malaysia 2020. Kawasan bandar ialah kawasan yang diwartakan serta kawasan tepu bina yang bersempadan dengannya dan gabungan kedua-dua kawasan ini mempunyai penduduk seramai 10,000 orang atau lebih semasa Banci Penduduk dan Perumahan 2020. Kawasan selainnya, yang diwartakan dan mempunyai jumlah penduduk kurang daripada 10,000 orang serta kawasan yang tidak diwartakan, dikelaskan sebagai kawasan luar bandar.
- 7.3** Kawasan tepu bina adalah kawasan yang terletak bersebelahan kawasan yang diwartakan dan mempunyai sekurang-kurangnya 60 peratus penduduk (berumur 15 tahun dan lebih) yang terlibat dalam aktiviti bukan pertanian.
- 7.4** Definisi kawasan bandar juga mengambil kira kawasan pembangunan khusus iaitu kawasan pembangunan yang tidak diwartakan dan boleh dikenal pasti serta terpisah dari kawasan yang diwartakan atau kawasan tepu bina melebihi lima kilometer dan mempunyai penduduk sekurang-kurangnya 10,000 orang dengan 60 peratus penduduk (berumur 15 tahun dan lebih) yang terlibat dalam aktiviti bukan pertanian.
- 7.5** Pemandaran merupakan proses yang dinamik dan sentiasa berubah mengikut kemajuan dan pembangunan. Oleh itu, kawasan bandar bagi Banci Penduduk dan Perumahan Malaysia 2010 dan 2020 tidak semestinya merujuk kepada kawasan yang sama kerana kawasan yang memenuhi kriteria bandar akan terus bertambah dan berkembang mengikut masa.
- 7.6** Klasifikasi kawasan mengikut strata yang digunakan adalah seperti berikut:

Strata	Jumlah penduduk dalam kawasan yang diwartakan, tepu bina dan kawasan pembangunan khusus
Metropolitan	75,000 dan lebih
Bandar besar	10,000 hingga 74,999
Bandar kecil	1,000 hingga 9,999
Luar bandar	Kawasan selebihnya

7.7 Bagi tujuan pensampelan, klasifikasi kawasan seperti di perkara 7.6 adalah digunakan untuk semua negeri serta Wilayah Persekutuan. Bagi Sabah dan Sarawak, memandangkan masalah kesukaran untuk akses ke kawasan pedalaman, strata luar bandar dikembangkan lagi berdasarkan kepada jangka waktu yang diambil untuk sampai ke sesuatu tempat dari pusat bandar yang terdekat.

7.8 Bagi tujuan penjadualan laporan, strata-strata dicantumkan seperti berikut:

Bandar = Metropolitan + Bandar besar

Luar bandar = Bandar kecil + Keseluruhan luar bandar

8. REKA BENTUK PENSAMPELAN

8.1 Reka bentuk pensampelan berstrata dua peringkat telah digunakan dalam HIES & BA 2024. Pembentukan strata adalah seperti berikut:

Strata utama	Meliputi semua negeri di Malaysia
Strata kedua	Meliputi daerah pentadbiran bagi semua negeri di Malaysia
Strata ketiga	Meliputi strata bandar dan luar bandar seperti yang dinyatakan di perkara 7.8

8.2 Pemilihan sampel dilakukan pada peringkat BP dengan menggunakan kaedah pensampelan rawak sistematik. Seterusnya sampel TK dipilih dari BP yang terpilih juga menggunakan kaedah sama melalui penjanaan nombor rawak dan menetapkan selang pemilihan supaya setiap TK mempunyai kebarangkalian yang sama untuk terpilih. Prosedur ini dilaksanakan secara teratur dan saintifik untuk menghasilkan sampel yang tidak pincang (*unbiased*) dan boleh mewakili keseluruhan populasi isi rumah di Malaysia.

9. SAIZ SAMPEL

9.1 Saiz sampel HIES & BA 2024 perlu mewakili populasi mengikut keperluan peringkat analisis yang ditetapkan. Saiz sampel ini telah mengambil kira elemen berikut:

- i) Penemuan daripada survei yang lepas iaitu HIES & BA 2022
- ii) Reka bentuk pensampelan; dan
- iii) Ralat yang disasarkan.

9.2 Penganggaran saiz sampel dikira di setiap daerah pentadbiran dan substrata (bandar dan luar bandar). Pengiraan saiz sampel turut mengambil kira purata pendapatan, asas keyakinan pada 95 peratus, ralat piawai relatif, kesan reka bentuk dan kadar respon yang telah ditetapkan.

9.3 Pengiraan saiz sampel bagi sub populasi j , n_{1j} dikira menggunakan formula berikut:

$$n_{1j} = \frac{n_{0j}}{1 + \frac{n_{0j}}{N_j}} \quad ; j = 1, 2, 3, \dots, k$$

di mana:

$$n_{0j} = \frac{\sigma^2}{(RSE \times \mu)^2}$$

Bagi memenuhi andaian-andaian dalam Pensampelan Berstrata, maka faktor kesan reka bentuk (D.E.) diambil kira:

$$D.E. = \frac{\text{varians bagi reka bentuk kompleks}}{\text{varians bagi SRS}}$$

Saiz sampel dengan mengambilkira D.E. bagi sub populasi j , n_{2j} diberikan oleh:

$$n_{2j} = n_{1j} \times D.E.$$

Dan seterusnya, mengambil kira kadar respon survei lepas, maka saiz sampel keseluruhan bagi sub populasi j , n_{3j} adalah seperti berikut:

$$n_{3j} = n_{2j} \times \frac{1}{\text{Kadar Respon}}$$

Maka, jumlah saiz sampel, n diberi oleh:

$$n = \sum_{j=1}^k n_{3j}$$

di mana:

- n_{0j} saiz sampel asas yang diperoleh mengambil kira *Finite Population Correction* (FPC) bagi sub populasi j
- n_{1j} saiz sampel yang mengambil kira faktor populasi bagi sub populasi j

10. PENGANGGARAN

Dalam prosedur penganggaran, pemberat (*non-response weight*) digunakan untuk mengambil kira kes tidak respon. Pemberat asal (*design weight*) disesuaikan dengan mengambil kira kadar tidak respon bagi setiap domain atau strata. Sebagai contoh, sekiranya 5,000 isi rumah terpilih tetapi sebanyak 4,000 isi rumah sahaja yang respon kepada survei maka pemberat asal (*design weight*) akan disesuaikan dengan mengambil kira 20 peratus tidak respon. Sekiranya pemberat asal (*design weight*) adalah 2.0 yang memberi maksud satu sampel isi rumah mewakili dua isi rumah dalam populasi maka pemberat (*non-response weight*) akan menjadi 2.5 yang memberi maksud satu sampel isi rumah mewakili 2.5 isi rumah yang lain.

11. LIMITASI DATA

11.1 Salah satu limitasi adalah data pendapatan isi rumah hanya meliputi bahagian pendapatan yang terakru dan diterima secara berulang kali dalam bentuk tunai atau barangan semasa tempoh rujukan survei.

11.2 Data pendapatan yang disediakan dalam laporan ini telah diperoleh melalui survei bagi isi rumah yang tinggal di tempat kediaman persendirian sahaja dan tidak termasuk tempat kediaman institusi. Tambahan pula, pendapatan isi rumah serta ciri-ciri yang digunakan untuk analisis (contohnya seperti: kumpulan etnik, kumpulan umur, kumpulan industri, kumpulan pekerjaan dan sijil tertinggi diperoleh) adalah merujuk kepada ketua isi rumah. Justeru, had tertentu berkaitan penggunaan data pendapatan mungkin akan timbul.

11.3 Analisis laporan ini merujuk kepada ketua isi rumah yang tidak semestinya merupakan penerima pendapatan utama.

12. PENILAIAN DATA

12.1 Data yang diperoleh daripada survei yang dijalankan secara sampel berkebarangkalian ini tertakluk kepada dua jenis iaitu ralat pensampelan dan ralat bukan pensampelan.

i) Ralat Pensampelan

Ralat pensampelan berpunca daripada anggaran data yang terhasil daripada sampel berkebarangkalian dan boleh diukur dengan mengira Ralat Piawai Relatif, biasanya dinyatakan dalam bentuk peratusan. Ralat ini digunakan sebagai penunjuk kepada kepersisan anggaran parameter yang dikaji, memberikan gambaran tahap variasi antara pemboleh ubah yang dianggarkan melalui survei dan parameter populasi.

Sebagai contoh, penemuan HIES & BA 2024 mendapati pendapatan kasar isi rumah bulanan purata bagi Malaysia adalah RM9,155 dengan Ralat Piawai Relatif 0.6 peratus. Dalam erti kata lain, nilai Ralat Piawai adalah RM52. Berasaskan 95 peratus selang keyakinan ($\alpha=0.05$), pendapatan kasar isi rumah bulanan purata berada dalam julat antara RM9,053 hingga RM9,257 sebulan.

ii) Ralat Bukan Pensampelan

Ralat ini boleh berpunca daripada liputan survei yang tidak lengkap, kelemahan liputan rangka, ralat dalam maklum balas, tiada respons dan kesilapan semasa peringkat pemprosesan seperti penyuntingan, pengekodan dan tangkapan data. Untuk memastikan kualiti data berada pada tahap yang tinggi, pelbagai langkah pentadbiran telah dilaksanakan untuk meminimumkan ralat bukan pensampelan. Langkah-langkah ini termasuk latihan intensif yang diberikan kepada penyelia dan penemuramah serta penyeliaan yang rapi dan semakan rawak dijalankan ke atas isi rumah yang diliputi oleh penemuramah untuk memastikan kesahihan maklumat yang direkodkan.

Bagi mengatasi kes tiada respons yang berpunca daripada beberapa sebab seperti TK kosong, tiada penghuni di rumah, enggan bekerjasama atau TK tidak layak diliputi dalam survei, maka penganggaran saiz sampel HIES & BA 2024 telah mengambil kira semua kemungkinan tersebut.

Pengemaskinian rangka pensampelan yang dilaksanakan dari semasa ke semasa telah dapat mengurangkan kadar tiada respons yang berpunca daripada TK kosong. Publisiti yang meluas dilaksanakan melalui media elektronik serta media cetak bagi mengurangkan kes tiada penghuni di rumah dan enggan bekerjasama.

Selain daripada itu, di peringkat prosesan data, semakan konsistensi bagi setiap pembolehubah dan proses validasi telah dilaksanakan secara sistematik bagi meminimumkan semua ralat bukan pensampelan.

13. HAD PENDAPATAN BAGI KUMPULAN ISI RUMAH MENGIKUT PENDAPATAN

13.1 Kumpulan Pendapatan Desil

Kumpulan desil pendapatan merupakan susunan yang kesepuluh dari isi rumah yang mana susunan ini disusun dari minimum ke maksimum. Kumpulan desil pertama adalah persepuluh yang pertama (10 peratus daripada semua isi rumah dengan pendapatan terendah). Desil yang terakhir adalah persepuluh dari isi rumah dengan pendapatan tertinggi.

13.2 Kumpulan Pendapatan Kuintil

Nilai yang diperoleh daripada hasil pembahagian data yang disusun mengikut magnitud kepada lima bahagian yang sama dipanggil kuintil. Dengan menggunakan kaedah ini, isi rumah telah disusun mengikut pendapatan dengan susunan menaik. Kuintil membahagikan isi rumah kepada lima kumpulan sama rata (dari terendah kepada tertinggi) yang mana setiap kumpulan mewakili 20 peratus atau satu perlima daripada bilangan isi rumah.

13.3 Kumpulan Isi Rumah mengikut Pendapatan

1. INTRODUCTION

The statistics published in this report is based on the Household Income and Basic Amenities Survey (HIS & BA) 2024 conducted by the Department of Statistics Malaysia (DOSM). The survey was carried out twice in five years to provide the data regarding income and poverty for **citizens** only. This technical note contains more detailed descriptions to help users to better understand this survey and report.

2. OBJECTIVE OF SURVEY

2.1 The main objectives of the survey are as follows:

- a) to collect information on income distribution pattern of households;
- b) to gather current statistics on poor households; and
- c) to identify the accessibility of basic amenities by households.

2.2 Data from the survey are pertinent information used by government agencies as inputs in the planning, the formation of national development plans and the monitoring of The Twelfth Malaysia Plan (Twelfth Plan). Furthermore, these data also serve as an essential reference to economists, academicians, the private sectors and individuals for more detailed research and analysis.

3. METHOD OF DATA COLLECTION

3.1 Data collection is carried out using the face-to-face interview approach. DOSM officers and staff who were involved in this survey were given special training as interviewers. They will visit Households (HH) in selected Living Quarters (LQ) to collect information related to demographics and income by using a set of questionnaires.

3.2 Data quality checks are made by experienced officers from the DOSM State office to detect and correct any errors or missing information when the survey is carried out. The field review process is also implemented for selected households to ensure the data collected are of good quality.

4. REFERENCE PERIOD

The information on household income was collected for the past twelve months. For example, for December 2024 survey month, the household income calculated is from 1st December 2023 to 30th November 2024.

5. SCOPE AND COVERAGE

5.1 This survey covers states, strata (urban and rural) and administrative districts in Malaysia.

5.2 The coverage of this survey are households that live in **private LQ** only and does not include those who live in institutional residences such as hostels, hotels, hospitals, old folk's homes, prisons and welfare homes.

6. CONCEPTS AND DEFINITION

6.1 Living Quarters

Living Quarters are defined as separate and independent structures that are usually used for living. The terms, **separate** and **independent** are defined as follows:

a) Separate

A structure is considered separate if it is surrounded by either walls, fences, etc. and is covered by a roof.

b) Independent

A structure is said to be independent when it has a direct access via public path, communal passageway or open space (i.e. the occupants can enter or exit their living quarters without going through someone else's premises).

6.2 Household

A household is categorised as a Malaysian household when the head of the household is a Malaysia citizen. A household is defined as a person or group of related or unrelated people who usually live together and make common provisions for food and other living essentials.

6.3 Head of Household

Head of household is defined as any member whether male or female who is considered the head of household by other members of the household. The head of the household must be an income recipient aged 15 years and over.

6.4 Income

*Detailed information on income is obtained from household members who receive income. The concept and definition of income used in this survey refers to the **Canberra Group Handbook on Household Income Statistics, Second Edition, 2011** published by the United Nations. The sources of income include:*

a) Paid Employment

Income from paid employment can be received in the form of cash or in the form of goods and services. This includes wages and salaries for time worked and work performed; cash bonuses and gratuities; commissions and tips; allowance; profit-sharing bonuses and other forms of profit-related payments and free or subsidised goods & services from employers (including free food/ concession).

Conceptually, employee income also includes social insurance contributions from employers, employer contributions to Employees Provident Fund (EPF) and severance & termination compensation payments (except for one-off retirement payments such as gratuities for pensioners, which are considered capital transfers).

b) Self-Employed

Income earned by individuals as a result of self-employed. Net income from self-employed includes profits or losses accruing to owners or partners or those working in an unincorporated enterprise. It also includes an estimate of the value of goods and services obtained through barter as well as goods or crops/livestock produced for own use, after deducting operating expenses.

The basis for measuring income from self-employed in household income statistics is based on the concept of net income, which is the value of gross output minus operating costs and after adjustment for depreciation of assets used in production. Profit occurs when income is greater than operating

expenses, while a loss occurs when operating expenses are greater than earnings.

c) **Property & Investment**

Income from property & investment is receipts from asset ownership, interest, dividends and rent. The details are as follows:

- *Income from property is defined as the revenue earned from the use or investment of assets made available to others for their use. It comprises returns that are usually in monetary form, from financial assets (interest and dividends), non-financial assets (rents) and royalties;*
- *Interest receipts are payments received from bank accounts or other financial institutions, certificates of deposit, government bonds/ loans, securities, debentures and loans to non-household members;*
- *Dividends are receipts from an investment in a company where the investor is not involved in the company's activities. This includes silent partners. It also includes pensions and annuities in the form of dividends from voluntary private insurance schemes;*
- *Rent is payment received for the use of assets such as land and houses;*
- *Royalties are incomes obtained from the services of patented or copyrighted materials, for example such as writing rights, copyrights for song compositions and others; and*
- *Imputed rent is assessed for homes occupied by its owners.*

d) **Current Transfers Received**

Transfers can consist of cash, goods or services. Transfers can be made between households to other households, between the government and households, or between households and charities. These receipts can be both within or outside the country. The main motivation is to redistribute income either by the government (e.g. educational aid, zakat, Sumbangan Tunai Rahmah (STR) and Sumbangan Asas Rahmah (SARA)) or individual/ private (e.g. corporate social responsibility).

Current Transfers received directly affect the level of Gross Income and influence the consumption of goods and services. Therefore, all Current Transfers received in the form of cash and goods or services are considered as part of income. However, the Current Transfer does not cover capital transfers.

6.5 Gross and Disposable Income

Gross income and disposable income are the two main concepts of income used in this report and can be defined as follows:

a) Gross Income

Gross income is the total amount of income earned by the household from all sources of income as stated in item 6.4.

b) Disposable Income

Disposable income is the household's gross income after deducting current transfers paid such as direct taxes, contributions to other households, zakat payments, other current transfers paid and current transfer received in the form of in-kind. This concept of disposable income reflects the real income of the household against current consumption and savings.

For the purposes of this survey, the effect of the distribution of public expenditure (collective expenditure) is not taken into account due to the difficulty in evaluating the benefits obtained as part of household income.

6.6 Household Income

Household income is the amount of income usually received (accrued) by household members, in the form of cash or goods received repeatedly during the survey's reference period (within a year or more frequently).

6.7 Income Recipient

Income recipient refers to household members who receive income from any source (as per item 6.4) during the reference period. A household can have more than one income recipient.

6.8 **Ethnic Group**

The ethnic groups of Malaysian citizens are categorised as follows:

- a) Bumiputera;
- b) Chinese;
- c) Indian; and
- d) Others.

6.9 **Highest certificate obtained**

Refers to the highest certificate obtained from a public or private educational institution that provides formal education. The highest certificate obtained is classified according to the International Standard Classification of Education (ISCED):

a) **PMR or Equivalent**

Refers to Penilaian Menengah Rendah, Sijil Rendah Pelajaran, Lower Certificate of Education, Sijil Rendah Agama, Pentaksiran Tingkatan Tiga or equivalent.

b) **SPM or Equivalent**

Refers to Sijil Pelajaran Malaysia or equivalent (Senior Cambridge Certificate, GCE O Level and Sijil Pelajaran Vokasional Malaysia). This includes basic skills certificates obtained from specialised and technical skills training institutions where the study period is at least six months such as the GIATMARA certificate.

c) **STPM or Equivalent**

Refers to Sijil Tinggi Persekolahan Malaysia, Higher School Certificate, or equivalent qualifications (Sijil Tinggi Agama and GCE A Level).

d) **Certificate**

Refers to certificates obtained from colleges, polytechnics or other institutions that offer formal education. The certification period should not be less than six months.

e) **Diploma**

Refers to diplomas and equivalent certificates obtained from universities, colleges, schools or polytechnics prior to a degree qualification.

f) Degree

Refers to a degree (Bachelor's Degree, Master's or Doctor of Philosophy) obtained from a public or private higher education institution or equivalent.

g) No Certificate

Refers to those who are still in school or have finished school without obtaining any certificate.

6.10 Occupation

Occupation is classified according to the Malaysia Standard Classification of Occupation (MASCO) 2020 classification developed by the Ministry of Human Resources (MOHR) based on the International Standard Classification of Occupations (ISCO).

For a person who has more than one job, only the job that takes the most time during the reference period is considered his main job. If the working time of each job is the same, then the job that provides the highest income is the main job. In cases where the length of employment and income are the same for each job, the job in which he has worked the longest is considered his main job.

6.11 Industry

Individual main occupation industry is classified according to the Malaysian Standard Industrial Classification (MSIC) 2008 which is based on the International Standard Industrial Classification of All Economic Activities (ISIC) Revision 4.

7. SAMPLING FRAME

7.1 *The framework used for the HIES & BA 2024 sample selection is based on the Household Sampling Framework which consists of Enumeration Blocks (EBs) created for the Population and Housing Census of Malaysia 2020 which is updated from time to time. EB is an area of the earth's surface created to carry out survey operations which on average contains between 80 to 120 LQs. All EBs are formed within gazetted boundaries that are within administrative districts, sub-districts or local authority areas.*

- 7.2** *EB in the sampling framework is classified according to urban and rural areas. Urban areas are defined as used in the Population and Housing Census of Malaysia 2020. An urban area is a gazetted area and a built-up area bordering it, and the combination of these two areas has a population of 10,000 or more at the time of the Population and Housing Census of Malaysia 2020. Other areas, which are gazetted and have a total population of less than 10,000 people and non-gazetted areas, are classified as rural areas.*
- 7.3** *Built-up areas are regions adjacent to gazetted areas and have at least 60 per cent of the population (aged 15 years and above) engaged in non-agricultural activities.*
- 7.4** *The definition of urban areas also takes into account special development areas, which are development areas that are not gazetted and can be identified and separated from gazetted areas or areas with built-up areas exceeding five kilometres and having a population of at least 10,000 people with 60 per cent of the population (aged 15 years and above), who are involved in non-agricultural activities.*
- 7.5** *Urbanisation is a dynamic process that constantly evolves with progress and development. Consequently, the urban areas identified in the Population and Housing Censuses of Malaysia 2010 and 2020 may not necessarily refer to the same locations, as areas meeting the urban criteria will continue to expand and develop over time.*
- 7.6** *The classification of the area according to the strata used is as follows:*

Strata	Population of gazette, adjoining built-up areas and special development area
Metropolitan	75,000 and more
Large urban	10,000 to 74,999
Small urban	1,000 to 9,999
Rural	All other areas

- 7.7** *For sampling purposes, the classification of areas as in point 7.6 is used for all states and Federal Territories. For Sabah and Sarawak, given the problem of difficulty in accessing the interior, the rural strata were further developed based on the length of time it took to reach a place from the nearest urban centre.*

7.8 For the purpose of tabulating the report, the strata are listed as follows:

Urban = Metropolitan + Large urban

Rural = Small urban + All rural

8. SAMPLE DESIGN

8.1 A two-stage stratified sampling design was used in HIES & BA 2024. The formation of the strata is as follows:

Primary strata	Covered all states in Malaysia
Secondary strata	Covered administrative districts for all states in Malaysia
Tertiary strata	Covering urban and rural strata as stated in point 7.8

8.2 Sample selection is performed at the EB stage using the systematic random sampling method. Next, the LQ sample is selected from the selected EB using the same method, generating random numbers and setting the selection interval to ensure equal probability of selection for each LQ. This systematic and scientific procedure is carried out to generate an unbiased sample that can represent the entire population of households in Malaysia.

9. SAMPLE SIZE

9.1 The sample size of HIES & BA 2024 needs to represent the population according to the requirements of the analysis level set. This sample size has taken into account the following elements:

- i) Findings from the previous survey HIES & BA 2022;
- ii) Sampling design; and
- iii) Margin of error.

9.2 Estimated sample size is calculated within each stratum (administrative districts) and substratum (urban and rural). The sample size calculation takes into account the mean income, a 95 per cent confidence level, relative standard error, design effect and specified response rate.

9.3 The sample size calculation for subpopulation j , n_{1j} is calculated using the following formula:

$$n_{1j} = \frac{n_{0j}}{1 + \frac{n_{0j}}{N_j}} \quad ; j = 1, 2, 3, \dots, k$$

where:

$$n_{0j} = \frac{\sigma^2}{(RSE \times \mu)^2}$$

To meet the assumptions in Stratified Sampling, the design effect factor (D.E.) is taken into account:

$$D.E. = \frac{\text{variance for complex sample}}{\text{variance for SRS}}$$

Sample size considering D.E. for subpopulation j , n_{2j} is given by:

$$n_{2j} = n_{1j} \times D.E.$$

And then, taking into account the response rate of the last survey, the overall sample size for sub-population j , n_{3j} is as follows:

$$n_{3j} = n_{2j} \times \frac{1}{\text{Response Rate}}$$

So, the total sample size, n is given by:

$$n = \sum_{j=1}^k n_{3j}$$

where:

n_{0j} the basic sample size obtained consider the Finite Population Correction (FPC) for subpopulation j

n_{1j} sample size that takes into account population factors for subpopulation j

n_{2j} sample size that takes into account design effect factors for subpopulation j

n_{3j} sample size that takes into account the response rate factor for subpopulation j

N the number of element units in the population

n total sample size

σ standard deviation

RSE relative standard error

μ mean income from previous survey

9.4 The sample size for HIES & BA 2024 is as follows:

10. ESTIMATION

In the estimation procedure, a weight (non-response weight) is used to account non-response cases. The original weight (design weight) is adjusted by considering non-response rate for each domain or stratum. For example, if 5,000 households are selected but only 4,000 households respond to the survey, the original weight (design weight) will be adjusted to account for a 20 per cent non-response rate. If the original weight (design weight) is 2.0, meaning that one household sample represents two households in the population, then the weight (non-response weight) will be adjusted to 2.5, indicating one household sample represents 2.5 other households.

11. LIMITATION OF THE DATA

- 11.1** *One such limitation is that the household income data covers only the income portion which accrues and received repeatedly in the form of cash or goods during the survey's reference period.*
- 11.2** *The income data presented in this report have been obtained through a household survey covering only private households, excluding the institutional households. Furthermore, household income had been used for analysis and the characteristics used (for e.g.: ethnic group, age group, industry group, occupational group and highest certificate obtained) refer to that of the head of household. As such, certain limitations are bound to arise in connection with the use of the income data.*
- 11.3** *Analysis of this report refers to the head of households, who need not necessarily be the main income recipient.*

12. DATA EVALUATION

- 12.1** *The data obtained from the survey conducted using a probability sample is subject to two types, namely sampling error and non-sampling error.*

i) Sampling Error

Sampling error arises from estimating data obtained from a probability sample and can be assessed by calculating the Relative Standard Error, typically expressed as a percentage. This error serves as an indicator of the accuracy of the estimated parameter under investigation, providing insight into the level of variation between the variables estimated through the survey and the population parameters.

For example, findings from the HIES & BA 2024 revealed that the mean monthly household gross income for Malaysia is RM9,155 with a Relative Standard Error of 0.6 per cent. In other words, the Standard Error value is RM52. Based on a 95 per cent confidence interval ($\alpha=0.05$), the mean monthly household gross income falls within the range of RM9,053 to RM9,257 per month.

ii) **Non-Sampling Error**

These errors can arise due to incomplete survey coverage, weakness in the survey framework, errors in feedback, non-responses, and mistakes during processing stages such as editing, coding and data capture. To maintain a high level of the data quality, various administrative measures have been implemented to minimize non-sampling errors. These measures include intensive training provided to supervisors and enumerators, as well as close supervision and random checks conducted on households covered by enumerators to ensure the accuracy and validity of the recorded information.

To overcome cases of no response resulting from several reasons such as empty LQ, no resident at home, refusal to cooperate or LQ not eligible to be covered in the survey, the sample size estimation of HIES & BA 2024 has taken into account all these possibilities.

The updating of the sampling frame implemented from time to time has been able to reduce the non-response rate caused by empty LQ. Extensive publicity is carried out through electronic media and print media to reduce cases of no residents at home and refusing to cooperate.

In addition to that, at the data processing level, consistency checks for each variable and validation processes have been systematically implemented to minimise all non-sampling errors.

13. THRESHOLD INCOME FOR HOUSEHOLD GROUP BY INCOME

13.1 Decile Income Group

The income decile group is the tenth order of households which is ordered from minimum to maximum. The first decile group is the first decile (10 per cent of all households with the lowest income). The last decile is the tenth of households with the highest income.

13.2 Quintile Income Group

The value obtained from dividing the data sorted by magnitude into five equal parts is called quintile. Using this method, households were sorted by income in ascending order. Quintiles divide households into five equal groups (from lowest to highest) where each group represents 20 per cent or one fifth of all households.

13.3 Household Group by Income

Threshold of monthly household income by household group for each strata, ethnic group and state are as follows:

14. COMPOUNDED ANNUAL GROWTH RATE

The calculation of the compounded annual growth rate is based on the exponential function as follows:

$$CAGR = \frac{\ln\left(\frac{Y_t}{Y_0}\right)}{t} \times 100$$

where;

CAGR	compounded annual growth rate
Y_t	monthly household income of the current year
Y_0	monthly household income of the previous year
t	period between the current year and the previous year

15. ROUNDING OF ESTIMATE

Counts for a category may not always be the same between tables due to arbitrary rounding. However, this difference is not significant.

The percentages shown in the table are obtained from actual figures and do not necessarily give an even number of 100 per cent due to rounding, although the number shown is 100 per cent.
